

St. David is an Anti-Idling Zone

Did you know that St. David is an anti-idling zone. Did you know that unnecessary idling wastes money and fuel, and produces greenhouse gasses that contribute to climate change? Natural Resources Canada says if most Canadian drivers limited idling to three minutes a day, over the course of a year, 1.4 million fewer tonnes of CO₂ emissions would go into the atmosphere. (CBCNews, 2019)

While waiting for your child after school, please turn off your car. It's not only the law, it is helping to save our planet.
